

Customer segmentation:

Customers are not all the same. It therefore does not make sense to use the same marketing techniques, messages and activities for all your customers.

Customer segmentation is a system that allows you to split your customers up into smaller groups, and therefore target your marketing more efficiently

Customer Constrains:

The recommender systems face certain challenges in their deployment such as cold-start, sparsity, scalability, user privacy, etc. The different application domains where recommender systems are being adopted these days include movie, music, books, news, tourism etc.

Job to be done/Problem:

job recommender systems have become popular since they successfully reduce information overload by generating personal-ized job suggestions. Although in the literature exists a variety of tech-niques and strategies used as part of job recommender systems, most of them fail to recommending job vacancies that fit properly to the jobseekers profiles. Thus, the contributions of this work are threefold, we: i) made publicly available a new dataset formed by a set of job seekers profiles and a set of job vacancies collected from different job search engine sites; ii) put forward the proposal of a framework for job recommendation based on professional skills of job seekers; and iii) carried out an evaluation to quantify empirically the recommendation abilities of two state-of-the-art methods, considering different configurations, within the proposed framework. We thus present a general panorama of job recommendation task aiming to facilitate research and real world application design regarding this important issue

- Our aim is to provide a Skill and good job life to our Customers.
