

ASSINGMENT -2

1.Create user table with user with email, username, roll number password

```
CREATE TABLE user (  
  roll_number int,   username  
  varchar(300),   email varchar(300),  
  password varchar(300)  
);
```

2. Perform UPDATE, DELETE Queries with user table INSERT Statement:

```
INSERT INTO user  
  
( roll_number, username ,email, password) VALUES  
(1, 'sineka', 'sineka@gmail.com','sineka007'),  
(2, 'gayathiri', 'gayathiri@gmail.com','gayathiri007'),  
(3, 'geetha', 'geetha@gmail.com', 'geetha123'),  
(4, 'monisha', 'monisha@gmail.com', 'monisha23');
```

UPDATE Statement:

```
UPDATE users  
  
SET username = 'gayathiri'  
  
WHERE roll_number = '4'
```

DELETE Statemnet:

```
insert into user values(4,'aa','aaa@gmail.com','aasdfg2') ; delete  
from user where roll_number='4'
```

3.Connect python with db2 conn =

```
ibm_db.connect("DATABASE=bludb;HOSTNAME=824dfd4d-
99de-440d-9991-
629c01b3832d.bs2io90l08kqb1od8lcg.databases.appdomain.cloud;P
ORT=3
0119;SECURITY=SSL
;SSLServerCertificate=DigiCertGlobalRootCA.crt;UID=lvq43963;PWD
=B snsG1l2sBgIRhVN",' ','')
```

4.create a flask app with registration page, login page and welcome page. by default load the registration page once the user enters all the fields store the data in database and navigate to login page authenticate user username and password. if the user is valid show the welcome page

```
from flask import Flask, render_template, request, redirect, url_for,
session from flask_mysqlldb import MySQL import
MySQLdb.cursors import reapp =
Flask(__name__)      app.secret_key

= 'your secret key'  app.config['MYSQL_HOST'] = 'localhost'
app.config['MYSQL_USER'] = 'root'
app.config['MYSQL_PASSWORD'] = 'your password'
app.config['MYSQL_DB'] = 'geeklogin'  mysql =
MySQL(app)
@app.route('/')
@app.route('/login', methods =['GET', 'POST'])  def
login():
msg = "if request.method == 'POST' and 'username' in request.form and
'password' in request.form:
```

```

username = request.form['username']    password =
request.form['password']

cursor = mysql.connection.cursor(MySQLdb.cursors.DictCursor)

cursor.execute('SELECT * FROM accounts WHERE username = % s
AND password = % s', (username, password,
))
    account = cursor.fetchone()

    if account:

session['loggedin'] = True            session['id'] =
account['id']        session['username'] = account['username']

msg = 'Logged in successfully !'            return
render_template('index.html', msg = msg)    else:

msg = 'Incorrect username / password !' return
render_template('login.html', msg = msg)

```

```

@app.route('/logout') def logout():

session.pop('loggedin', None)

session.pop('id', None)

session.pop('username', None) return redirect(url_for('login'))

```

```

@app.route('/register', methods =['GET', 'POST']) def register():

msg = "

if request.method == 'POST' and 'username' in request.form and
'password' in request.form and 'email' in

request.form : username =

request.form['username'] password =

```

```

request.form['password']    email =
request.form['email']

cursor = mysql.connection.cursor(MySQLdb.cursors.DictCursor)

cursor.execute('SELECT * FROM accounts WHERE username = % s',
(username, )) account =

cursor.fetchone() if account:

msg = 'Account already exists !'    elif not
re.match(r'^@]+@^[^@]+\.[^@]+', email):
    msg = 'Invalid email address !'    elif not
re.match(r'[A-Za-z09]+', username):
    msg = 'Username must contain only characters
and numbers !'    elif not username or not
password or not email: msg = 'Please fill out the
form !' else:

cursor.execute('INSERT INTO accounts VALUES (NULL, % s, % s, %
s)', (username, password, email, ))

mysql.connection.commit()                msg = 'You
have successfully registered !'    elif request.method ==
'POST':

msg = 'Please fill out the form !' return render_template('register.html',
msg = msg)

```
